

Fina Chemicals - Pipelines - Belgium

ZINGA was applied on the outside surfaces of large pipings, girders and lighting poles in 1988. of the company Fina Chemicals in Feluy. The application was done without topcoats. During an inspection in 1997, it was obvious that there still was no need for touch-ups.

System :

ZINGA 2 x 60 µm

This is a testimonial letter from Fina Chemicals, dated 25/02/97, wherein the excellent condition of the ZINGA after 10 years is confirmed. It is also stated that ZINGA has a lower maintenance cost compared to hot-dip.

ZINGAMETAL
Rozenstraat, 4

9810 - EKE

Dear Sirs,

We confirm herewith that the outside covering of large piping has been treated with ZINGA without topcoat for several years and this to our complete satisfaction.

The application was performed in 1988. Recent inspections show and prove that the covering does not need any retouch.

We also use ZINGA on old metal-girders and lighting poles, again with complete satisfaction.

This film galvanised system has been used as an anti-rust protection which can be compared to hot dip galvanisation.

There is no doubt that this process permits to renew most of the iron works with a low maintenance cost in comparison with hot dip galvanisation.

Kind regards.

E. GAUBE
